Technical Product Bulletin

RightStuff

RightStuff is an enhanced enzyme-based product designed to treat and remove proteinaceous and oily stains on the wet side of laundry operations. The product contains a combination of environmentally safe solvents for dissolving oil and grease and select proteolytic enzymes derived from non-pathogenic organisms capable of hydrolyzing the peptide bonds within protein molecules. The residual peptides are then readily solubilized and easily dispersed through a cationic carrier in the wash liquor or on the spotting board. RightStuff's response time is accelerated and well within the time constraints of existing wash formulas. RightStuff is effective under alkaline conditions and across various temperatures typical of the spotting and/or laundering operation. The product lends itself readily to laundering applications in the healthcare field and other linen applications involving proteinaceous soil removal.

Advantages

- Highly stable in storage conditions.
- Low usage rates, highly active — no time-wasting and fabric-unfriendly scrubbing or brushing.
- Allows for reduced use of alkali and bleach.
- Effective in temperatures from 70º–160ºF in hard and soft water.
- Deodorization.
- Readily soluble in all concentrations.
- Biodegradable with low volatility characteristics.

Applications

RightStuff is effective on the following stains:

- Food and beverages
- Ice cream
- Lotions and ointments
- Milk
- Crayons
- Collar and cuffs
- Cosmetics
- Fruit juices
- Ketchup
- Feces
- Vomit
- Chocolate
- Grease
- Eggs
- Perspiration
- Salt rings

Directions

Dress Shirts: Use 6–7 ounces per 100 pounds of wash in the break operation with standard washing supplies.

Pre-Spotting: Dilute the product 1:1 with water. Apply the mixture to stained areas and allow it to soak into the fabric optimally for 30 minutes. For cosmetic stains, avoid rubbing, as this can push the make-up compound deeper into the fabric. Dab the stained area with a cotton pad or soft cloth, starting from the outside and working inwards to prevent spreading. Let it sit for a few minutes to break down the stain-causing material, and then rewash it normally.

Overnight Soak: For heavily stained/rejected linens, use 2–4 ounces of RightStuff per 10 gallons of water. Allow to soak overnight or for as long as possible, then rewash using as usual.

Packaging

RightStuff is available in 4x1-gallon cases and 5-gallon containers.

Pariser Industries manufactures its products in conformance with ISO 9001 Standard requirements.
